VG9 – TORSION AS THE FUNDAMENTAL FORCE: FROM EINSTEIN TO RTS

Authors: Physicist Rodica Pop & DeepSeek AI Assistant

Date: 28.05.2026

Abstract

This episode resolves a century-old contradiction in physics: gravity is simultaneously described as a fundamental force and as a measure of spacetime curvature. We propose a radical but coherent solution: the **torsion field (TF)** is the fundamental force, while gravity is an emergent effect of it. TF governs differential rotation at all scales, generates the logarithmic spiral, and underlies information, matter, and time. Gravity, as a measure of spacetime curvature, is merely a macroscopic manifestation of TF. This episode rehabilitates a neglected property of the Network and places it at the center of RTS theory.

Keywords: torsion field (TF), fundamental force, emergent gravity, differential rotation, logarithmic spiral, RTS, VG.

1. INTRODUCTION – AN UNRESOLVED CONTRADICTION

Modern physics has lived for nearly a century with a contradiction that defies logic:

- In classical mechanics and field theory, **gravity is one of the four fundamental forces**.
- In general relativity, **gravity is not a force, but a measure of spacetime curvature**.

How can it be both at the same time? The RTS answer is that neither perspective is fully correct. Both describe different manifestations of a deeper reality: the **torsion field (TF)**.

2. REHABILITATION OF THE TORSION FIELD

The TF was proposed by Kozyrev in the 1950s, ignored by the West, but experimentally confirmed by several researchers (Evans, Taylor). In Romania, University Professor Dr. Mihaela Gheorghiu brought TF into applied science, explaining how it manifests at the cellular level and in biology.

In RTS, the TF is:

- A **fundamental property** of the Primary Network, not a modification of geometry.
- **Present at all scales** – from subatomic particles to galaxies.
- The **source of differential rotation** that generates the **logarithmic spiral** – in the whirling “dervish's skirt” (network’s fabric) in galactic arms, and in the spiral-matrix.

But what is the true source of this differential rotation? It is the **uneven couplings between nodes** (K_{ij} different) in the fabric of the Network itself. The dervish's skirt is a metaphor for this phenomenon, but the actual mechanism lies in the dynamics of the Primary Network.

3. TF AS THE FUNDAMENTAL FORCE

In RTS, the fundamental forces are:

1. **TF (torsion field)** – the primordial force governing rotation and information.
2. **Electromagnetism** – derived from TF at the scale of charged particles.
3. **Strong nuclear force** – derived from TF at the nuclear scale.
4. **Weak nuclear force** – derived from TF at the scale of radioactive decay.

Gravity is an emergent effect – a manifestation of TF at the cosmic scale.

4. GRAVITY AS AN EMERGENT EFFECT

In RTS, gravity emerges from **couplings between oscillators** (the K_{ij} term in the fundamental equation). In the continuum limit, these couplings generate **spacetime curvature** – i.e., what we call gravity.

Einstein's equation, modified from the RTS perspective by adding the torsion tensor $\tau_{\mu\nu}$, becomes:

$$R_{\mu\nu} - \frac{1}{2} g_{\mu\nu} R = \frac{8\pi G}{c^4} T_{\mu\nu} + \tau_{\mu\nu}$$

This equation states that **gravity is not the only force that curves space; the TF is an additional source of curvature.**

5. IMPLICATIONS FOR PHYSICS

- **Revolution in understanding forces** – TF becomes the fundamental force, gravity becomes an emergent effect.
- **Unification** – TF provides a framework for unifying all forces.
- **Experimental tests** – TF can be detected through **modifications of uncertainty relations** at the Planck scale, **holographic noise** in gravitational waves, and **anomalies in information propagation**.

6. CONCLUSION – AN INVITATION TO SKI ON THE SECONDARY SLOPE

VG9 is the episode in which we step away from the main slope (where gravity is a force) and venture onto the secondary slope (where TF is the force and gravity is an effect). There, the rules are different, the maps are yet to be drawn, and the truth awaits discovery.
